PROFESSIONAL SUMMARY

Robotics Infrastructure Engineer supporting production robotics systems and vision container deployments to Walmart customer sites. Experienced with Ubuntu, Python, shell scripting, MLOps change requests, post-deployment checks, and production troubleshooting. Skilled in RHEL systems administration, telemetry analysis (SQL, Tableau, Sankey), production triage, and operational hardening. Prior U.S. Secret Clearance.

TECHNICAL SKILLS

- **Operating Systems:** Ubuntu Linux, Red Hat Enterprise Linux, CentOS, Windows, SSH
- **Scripting & Deployment:** Python, Bash/Shell Scripting, Vision Container Deployments, Change Request (CR) Process
- **Testing & Monitoring:** Post-Deployment Checks, Command-Line Logs, Failure Identification, Robotics Monitoring, Tableau
- **Engineering Tools:** Jira, Confluence, Git, GitHub, SQL, Power Automate
- Robotics Operations: Production Troubleshooting, Teleoperations, Incident Response, SOPs, Cross-Team Coordination
- **Additional Technologies:** REST APIs, MySQL, Node.js, React, Microsoft Teams, SharePoint

PROFESSIONAL EXPERIENCE

Symbotic | Wilmington, MA

Robotics Infrastructure Engineer II | August 2025 – Present

- Continue to support vision container deployments to Walmart customer sites using Ubuntu, Python, and shell scripts, coordinating changes with the MLOps team through the CR process.
- Run post-deployment checks that identify robots with failed vision container updates; review command-line output and logs to verify results.
- Support production robotics infrastructure and teleoperations across automated warehouse sites, troubleshooting issues and coordinating recovery.
- Analyze operational data in SQL and Tableau to identify recurring issues, performance trends, and areas for improvement.
- Maintain SOPs and escalation guidance in Confluence and track engineering issues and operational work in Jira.

Symbotic | Wilmington, MA

Robotics Infrastructure Engineer | August 2024 – August 2025

- Executed overnight vision container deployments to Walmart customer sites using Ubuntu Linux, Python, and shell scripts through the MLOps change request process.
- Monitored deployments and reviewed script output to identify robots requiring follow-up after software updates.
- Supported robotics troubleshooting and recovery at production warehouse sites, using operational data and logs to investigate issues.
- Worked with engineering teams on production issues, tooling updates, documentation, and process improvements.

MIT Lincoln Laboratory | Lexington, MA

System Administrator Co-Op (Group 92) | September 2023 – January 2024

- Deployed an internal web application on Red Hat Enterprise Linux 9 using Node.js, Express, React, and MySQL.
- Built REST API endpoints and configured SSL certificates for secure application access.
- Supported OS patching, system imaging, hardware troubleshooting, and workstation deployments.
- Held a U.S. Secret security clearance during the co-op.

TECHNICAL PROJECTS

Full-Stack Internal Board Application | *RHEL 9, Node.js, Express, React, MySQL, SSL*

- Built and hosted a web application on a RHEL 9 virtual machine with React, Node.js, Express, and MySQL.
- Developed eight REST API endpoints to retrieve application data from MySQL.
- Configured SSL certificates to secure the application.

EDUCATION & CERTIFICATIONS

Wentworth Institute of Technology | Boston, MA

Bachelor of Science in Computer Science | Graduated: August 2024

- **Relevant Coursework:** Operating Systems, Data Structures & Algorithms, Software Engineering, Database Systems, Network Architecture
